● ABOUT ME

Full-Stack Developer with 3+ years of experience building scalable web applications and **multi-tenant SaaS** platforms using **Node.js**, **NestJS**, and **React.js**.

I work with databases like **PostgreSQL**, **MongoDB**, **MySQL**, and **Redis**, and I build clean REST and GraphQL APIs, microservices, and Docker containers for easy and fast deployments. I also handle serverless apps on **Google Cloud Platform (GCP)** using **Cloud Run** (for services and jobs), **Artifact Registry** to store and manage containers securely, and **Cloud Scheduler** to run automated tasks on a schedule.

On the frontend, I use **Tailwind CSS**, **Zustand**, and **shadcn/ui**. I have experience with AI tools (**OpenAI + LangChain**), HIPAA-compliant features, role-based access control (RBAC), and writing tests with **Jest**. I'm good with CI/CD using **GitHub Actions** and **Husky**, plus cloud tools like **AWS EC2/S3** and GCP.

I enjoy writing clean, reliable code and helping build working products that make business processes easier and more secure.

● WORK EXPERIENCE

SOFTWARE ENGINEER – FUTURENOSTICS – 11/2024 – Current – E11, ISLAMABAD, PAKISTAN

- Built a Medicaid compliance system on Google Cloud Platform (GCP), using Cloud Run for serverless deployment and Artifact Registry to manage containers securely.
- Built a Sales Management System for e-commerce businesses to handle sales, inventory, and orders more easily.
- Added Role-Based Access Control (RBAC) with custom roles and permissions to make the system more secure and block unauthorized access.
- Worked with cross-functional teams using Agile methods, tracked tasks in Jira, and delivered features on time with high quality.
- Used Docker to containerize the app and speed up deployments.
- Set up Husky pre-commit hooks to catch code issues early and keep quality high.
- Automated workflows by connecting Monday.com with Google Sheets, saving time for the team.
- Created a HIPAA-compliant custom form builder for the Case Management Hub so staff members can create, send, and manage forms easily.

BACKEND DEVELOPER – ARGONTEQ – 06/2023 – 12/2024 – MODEL TOWN, LAHORE

- Developed backend for an educational CRM, managing student profiles, enrolments, and progress tracking.
- Built user registration and authentication modules for secure admin and parent access.
- Created a document query platform (Willo Box) using OpenAI APIs and LangChain to process PDF uploads and answer context-based questions.
- Developed secure backend for a crypto exchange platform, utilising MongoDB for user data and transactions.
- Built backend for a gaming platform, allowing users to play games and admins to upload new games, with tournament organisation features.

- Contributed to a restaurant tipping platform by integrating Google Reviews to enhance customer and restaurant interactions.
- Developed a platform for pharmacies to buy and sell medications, managing transactions and pharmacy registrations.

● SKILLS

Frontend

HTML | CSS | React.js | Bootstrap | Tailwind CSS | Zustand | Shadcn/UI

Backend

JavaScript | NestJS | Node.js | Express.js | GraphQL

Databases

MongoDB | PostgreSQL | MySQL | Redis

Version Control & Collaboration

Git | GitHub | GitLab | GitHub Actions | Husky

Cloud & Deployment

AWS | EC2 | S3 | GCP | GCS | Firestore | Cloud Run | Artifact Registry | Docker

Testing & Code Quality

Jest | ESLint | Prettier | Storybook | Unit Testing | Integration Testing | Postman Automation Testing

Project Management & Collaboration

Jira | ClickUp | Slack

Tools & Other Technologies

RabbitMQ | Microservices Architecture | WebSockets

● PROJECTS

Sales Management System

Designed a SaaS-based Sales Management System for ecommerce businesses to manage sales, inventory, and orders.

Task Management System

Built a task management system with role-based access control (RBAC) and granular permissions for assigning, tracking, and managing tasks across teams. Implemented different roles such as Admin, Manager, and Member, each with specific permissions to ensure secure and efficient task flow.

Case Management Hub (CMH)

Developed a multi-tenant SaaS platform for case management, enabling real-time collaboration and dynamic form building. The Custom Form Builder feature allowed organizations to create, manage, and distribute HIPAA-compliant forms.

Monday.com ↔ Google Sheets Automation

Developed an automation service to sync data between Monday.com boards and Google Sheets, automating project workflows.

Solutionz

Developed a backend for managing student profiles, enrollments, and academic progress tracking.

Willo Box

Built a platform for uploading PDFs and querying content using OpenAI APIs and LangChain for semantic search.

Katanalnu

Created a gaming platform similar to Steam, where users can play and purchase games, while admins can upload and manage content. Added social features for tournament organization and user interaction.

Obon

Integrated Google Reviews for customer feedback into a restaurant tipping platform.

● EDUCATION AND TRAINING

11/2020 – 06/2025 Lahore

BS SOFTWARE ENGINEERING Virtual University of Pakistan

Final grade 3.66/4

11/2013 – 11/2015 Pattoki

F.SC PRE ENGINEERING Govt. Degree College

Final grade 82%
